The most common reasons you might want to avoid screen capture are: If the screen displays sensitive information (password, credit card information, etc.) You show paid content that you don't want to record and shareThis is especially important on android because api android.media.projection third-party apps to perform screen capture or screen sharing (even if the app is a background). Currently, the screen image on iOS cannot be prevented. This is due to the OS limit values. Android DeviceAndroid EmulatorIOS DeviceiOS DeviceiOS { usePreventScreenCapture } from screen capture on screen; import react from react; import { Text, View } from reactive; export default ScreenCaptureExample() { usePreventScreenCapture(); return (As long as this component <View style={{ flex:= 1,= alignitems:= 'center',= justifycontent:= 'center'= }}}=> <Text>installed,</Text> </View> this screen is inconquent! ; } import * as ScreenCapture from expo-screen-capture; import * as licences from exposure licences; import react from react; import { Button, View, Platform } from reactive; export the default ScreenCaptureExample class expands the React.Component { async componentDidMount() { const { status } = wait Permissions.askAsync(Permissions.CAMERA_ROLL); if (status == 'granted') { ScreenCapture.addScreenshotListener() = > { alert('Thanks for <View style={{ flex:= 1,= alignitems:= 'center',= justifycontent:= 'space-around'= }}}=> </Button title=Activate onpress={this._activate}></Button> </Button title=Deactivate onpress={this._deactivate}></Button; </View> screenshotting my beautiful app ☺); }); } render() { return (); } _activate = async () = > { wait ScreenCapture.preventScreenCaptureAsync(); } _deactivate = async () = > { wait ScreenCapture.allowScreenCaptureAsync(); } } import * as ScreenCapture from expo-screen-capture; Reactive hook to prevent screen capture as long as the owner component is installed.key (string) [Optional] If specified, this will prevent several instances of this hook or prevent ScreenCaptureAsync and allow ScreenCaptureAsync methods to contradict each other. This argument is useful if you have multiple active components that use the allowScreenCaptureAsync hook. Default default. Prevents screenshots and screenshots until it is called ScreenCaptureAsync. If you're already preventing screen capture, this method doesn't do anything (unless you're past a new and unique key). Keep in mind that iOS will only prevent screenshots and is only available on iOS 11 and later. In earlier versions of iOS, this method does nothing.key (string) [Optional] If this is provided, this will help prevent multiple instances of ScreenCaptureAsync prevention and allows theScreenCaptureAsync methods (and the use of PreventScreenCapture hook) not contradict each other. If you're using multiple keys, you'll need to allow each key again to re-enable screen capture. Default default. Allows the user to re-record the screen or screenshot of the app. If you haven't already dialed preventScreenCaptureAsync(), this method does not make the nullkey (string) [Optional] The value must be the same as the key that was downloaded to preventScreenCaptureAsync from re-enabling the screen capture. Adds a listener who will shoot whenever the user takes a screenshot while the app is in the foreground. In android, this method READ_EXTERNAL_STORAGE- you can request this with (function) A feature that will execute when a user takes a screenshot. Screen. function does not accept any arguments. A subscription object that you can use to unsute the listener, either by calling .remove() or bypassing ScreenshotListener.Remove the subscription you provide so that you no longer listen for screenshots.subscription (subscription) Subscription returned by addScreenshotListener. If you prefer, you can also call .remove on this Subscription object, for example, let mySubscription = addScreenshotListener() => { console.log(You recorded a screenshot!); } ... mySubscription.remove(); Remove ScreenshotListener(mySubscription); Ask a question on the forumsView of open problems for ScreenCaptureView of the source code for ScreenCaptureMak this page MNML, pronounced minimal, is a free and simple screen recorder for Android. There are too many screen recorders out there that are poorly designed, have too many unnecessary features, or have ads. Redistribute this application as your own is not allowed. Page 2 Watch 16 Star 498 Fork 52 You cannot perform this action at this time. You signed in with another tab or window. Reload to refresh the seed. You have unsumoreed in another tab or window. Reload to refresh the seed. You may have seen more tutorials recorded on your computer, especially on YouTube channels. Have you ever wondered how to make this kind of recording on your smartphone? This type of video is usually recorded using the screen recording app on your mobile phone. If your company works with videos with notes, this article will recommend the best mobile screen recording apps to help you create amazing videos for your audience. Let's get to the start? 10 Tips for the Android screen recording app If your mobile phone is running in Android version 5.0 or higher, your device can record your screen. Let's take a look at some of these apps. 1. AZ Screen Recorder AZ Screen Recorder can be downloaded for free in the Play Store. The app allows you to record quality videos and has a feature that allows you to capture audio during recording. The produced material is exported directly to the phone gallery, but the app has an internal gallery if needed. Az Screen Recorder has a rating of 4.6 by Play Store users, one of the highest in-app ratings in this category. 2. Unlimited screen recording with unlimited screen format, you can capture any content from your phone without a duration limit and with the option to set the number of frames per second. Other available settings include recording resolution and orientation, which can be horizontal or vertical. In addition, Unlimited Screen Record has standard devices such as audio recorder and external gallery. 3. OneShot OneShot is one of the easiest to use applications to record the screen. After installation, select Screen capture to start recording. In addition, the app has an internal gallery where you can quickly access video after recording. You can also set the resolution and speed of the content, in addition to to allow sound from microphone, the ideal option for those who want to create a tutorial or video gameplay. 4. Screen Recorder Screen Recorder has a simple and intuitive interface. You can record videos without a time limit, essential features for those who work with long videos or interpreter watches. However, you should be careful that content does not overload the app's internal gallery. Screen Recorder cannot record audio in its free version. To activate this and other features, you need to buy a premium version that costs about USD\$1.00. 5. Rec Rec is one of the most searched cell phone screen recorders among users. This is because you can record content in high quality, allowing you to capture videos for up to 5 minutes in Full HD. The app has features that are more basic that can be downloaded for free in the Play Store. The premium version, which allows high definition recording up to one hour, costs USD \$7.99, which is expensive compared to other apps on this list. 6. Mobizen To access mobizena, our next template application for recording the screen of your smartphone, you must log on. It can be used on a smartphone or computer. Mobizen has a great unique feature: a floating button that allows you to access its features from anywhere on the screen or mobile phone without having to change the app! 7. Lollipop Screen Recorder In general, Lollipop Screen Recorder has a very simple interface and does not have very advanced recording features. However, you can set the camera orientation and use the audio recorder that is included with the app. But pay attention. As the name implies, Lollipop Screen Recorder only works on smartphones running Android version 5.0 or more. 8. Ilos Screen Recorder Like our previous suggestion, Ilos Screen Recorder has also very simple commands, but

includes a few extra features. With this app to record your cell phone screen, you can use your mobile phone's sound or enable the microphone to record your voice, which is an interesting feature if your content is, for example, a tutorial. Free for download, this app also lets you choose multiple recording options and includes an internal gallery that automatically organizes recorded content. 9. Telecine Simple, but very effective, Telecine includes very useful and simple features. One of them is the ability to hide or display notifications received by a cell phone during recording. This allows you to prevent your messages from interfering in the tutorial, in addition to preserving your privacy. The app also includes audio commands and an internal gallery that you can quickly access after recording is complete. And all this for free! 10. SCR Screen Recorder SCR Screen Recorder is one of the most recommended Android cell phone screen recorders. During recording, you can record audio, video, and you can also use the camera. To access the app, you must right, that is, enable the functions of the super user. However, this procedure is recommended only for advanced users. iPhone screen-recording app tips Although we list many Android mobile phone screen-recording app options, it doesn't mean that iPhone users are missed! If you're one of them, you can download and install one of the following video recording options: 11. QuickTime QuickTime is Apple's own video player, that is, it's only available on its devices. As a result, it has great integration with iPhones and iPads and access to advanced features. With QuickTime, you can set recording quality and use external audio recorders to create videos with professional audio, for example. 12. Airshou Airshou is one of the most popular applications among professionals who create tutorials for games or programs. For? Because it allows you to record all the content displayed on the iPhone screen and charges nothing for it. One of the main features of this application is the possibility of recording in 1080p (Full HD) and 60 fps, stereo audio recording, floating recording control and no jail required. 13. Spotlight Spotlight is an application for mirroring and recording the screen for various devices, including iPhones. Unique features of this app compared to others include audio recordings from your device or microphone, live playback on YouTube, a screen captures a screen of different devices, and video quality settings. Widely used by experts, Spotlight is available in the Apple App Store for USD \$14.99. Start recording your videos now Well, what did you think of our list of the best apps to record your screen on your mobile phone? Now that you've checked our tips, make sure you download the app you think is best and start making your own videos. You can use these programs to record tutorials on how to use a particular software or web service, record video gameplay or any other content that you find interesting! Roll up your sleeves and go to work! And while we're talking about apps that capture the screen, how would you check the best software to record your pc's screen? Just click on this link! Link!
